Jaigopal Garodia National Higher Secondary School **10th** with
75.80% (2008 -2009)

Description:

EZYiD's cloud based Asset Management Platform paired with RFID technology is the easy way to improve workforce productivity, increase asset's lifespans in the field and protect your users from preventable hazards and injury.

Roles and Responsibility:

- Used Flutter frame work to develop the app.
- Created reusable widgets of primary colours and font sizes which can be referenced in any module of codebase.
- Involved in documenting UI designs to determine the possible best widgets to make screens look beautiful.
- Used Google map to track the assets and inspection locations of the assets.
- Used Bloc with cubit for state management to handle the states efficiently.
- Contributing to the development of project schedules and workflows.
- Interacting with different departments within the organization regarding new deployments.
- Recommending changes and enhancements to software applications.
- Involved in client meeting and gathered the requirements for mobile app.
- Used agile approach through Jira tool.
- Efficiently consumed and managed RESTFUL web services with JSON formats.
- Involved in code review.
- Actively participating in professional development activities, attending conferences, joining online communities, and sharing knowledge and experiences with fellow developers.
- Identifying and resolving technical challenges and issues that arise during the development process. Demonstrating strong problem-solving skills to overcome obstacles and deliver robust solutions.
